Customers are listed below by account number. Each row corresponds to one customer, along with information such as their call plan, credit remaining, etc.
The SIP and IAX buttons create SIP and IAX entries to allow direct VoIP connections to the Asterisk server without further authentication.
For further information please consult the [online documentation](#).

SIP and IAX Config will create a SIP or IAX entry on the Asterisk server, so that a customer can set up a SIP or IAX client to connect directly to the asterisk server without the need to enter an account and pin each time a call is made. When done, click on the CONFIRM DATA button, then click reload to apply the changes on the Asterisk server.
The customer must then enter the URL/IP address of the asterisk server into the SIP/IAX client, and use the Account Number and Secret word as the username and password.
For further information please consult the [online documentation](#).
